Kinetics Mutual Funds
Third Quarter 2026 Commentaries

The Multi-Disciplinary Income Fund

Click Here for Standardized Performance

Dear Fellow Shareholders,

During the third quarter, we continued to allocate capital to Collateralized Loan Obligation (CLO) investments. As of the end of third quarter of 2026, the Fund's capital was mostly deployed. The strategy of investing in AAA and AA rated CLO debt tranches fits within the Fund's goal of generating current income while mitigating interest rate risk.

CLO debt is primarily floating rate, and based off of the three-month SOFR.[1] The AAA and AA debt tranches are initally sold in the primary market to investors at a price of generally 100% of par,[2] and the coupon rate resets every three months, based on the then-prevailing three-month SOFR, which provides a hedge against interest rate risk. The coupon rate of a CLO debt tranche is a combination of the three-month SOFR plus a credit spread[3]. As of September 30, 2026, the three-month SOFR was 4.08%.

In the primary market as of the end of the third quarter 2026, the average credit spread for recently issued AAA rated CLO debt tranches was about 120 basis points[4], and for AA rated CLO debt tranches, it was about 150 basis points. This resulted in a coupon rate of approximately 5.25% for AAA debt and 5.55% for AA debt. The interest due is paid quarterly to CLO investors.

There's also an active secondary market to buy and sell CLO debt. Since older vintage CLO debt may have lower or higher credit spreads than today's primary market levels, CLO debt in the secondary market may be bought and sold at a discount or premium to par.

We continue to see an appetite among institutional and retail investors for CLO debt tranches for a number of reasons—including the risk-adjusted returns, the steady income stream, and the floating interest rate structures. As a result, we think this is an excellent time to invest in AAA and AA rated CLO debt tranches.

Multi-Disciplinary Income Fund Top Fixed Income Holdings (%) as of September 30, 2026	
Collateralized Loan Obligations	95.8%
Cash and Cash Equivalents	4.2%

[1] The Secured Overnight Financing Rate (**SOFR**) is a broad measure of the cost of borrowing cash overnight collateralized by Treasury securities.
[2] **Par** value is the nominal value of a bond, share of stock, or a coupon as indicated in writing on the document or specified by charter.
[3] The **credit spread** is presented as a single number representing the approximate credit spreads for recently closed deals (as of September 30, 2026), in the primary market with 2-years of call protection and a 5-year reinvestment period. The credit spread for future primary deals may vary substantially based on the specific CLO terms and other factors including who is the CLO manager.
[4] **Basis points**: Basis points are a common unit of measure for percentages in finance. One basis point equals 1/100th of 1%.

Important Risk Disclosures

You should consider the investment objectives, risks, charges, and expenses of the Fund carefully before investing. You should read the Prospectus carefully before you invest. Performance data quoted represents past performance, which does not guarantee future results. Investment return and principal value of an investment may fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit http://kineticsfunds.com/ for the most recent month-end performance data.

Portfolio holdings information, if any, is subject to change at any time and is as of the date shown.

The opinions expressed are not intended to be a forecast of future events, or a guarantee of future results, or investment advice. Additionally, the views expressed herein may change at any time subsequent to the date of issue hereof.

The Fund may invest in options and other derivative instruments, which are specialized activities and entail greater than ordinary investment risks, including that they may be illiquid, difficult to price and leveraged so that small changes may produce disproportionate losses. Additionally, the Fund invests in debt securities. Investments in debt securities rated below investment grade are subject to increased risks. International investing also presents special risks including currency exchange fluctuation, government regulations, and the potential for political and economic instability. Non-investment grade debt securities are subject to greater credit risk, price volatility and risk of loss than are investment grade securities. Further, options contain special risks, including the imperfect correlation between the value of the option and the value of the underlying asset. Investments in collateralized loan obligations (CLOs) involve significant risks. A CLO is a securitization vehicle collateralized by a pool of credit-related assets. Generally, these assets are below investment grade and are subject to greater credit risk, price volatility and risk of loss than investment grade securities. CLO securities present risks similar to those of other types of credit investments, including default (credit), interest rate and prepayment risks. The extent of these risks depends largely on the type of securities used as collateral and the debt tranche of the CLOs in which the Fund invests. In addition, CLOs are often governed by a complex series of legal documents and contracts, which increases the risk of dispute over the interpretation and enforceability of such documents relative to other types of investments. There is also a risk that the trustee of a CLO does not properly carry out its duties to the CLO, potentially resulting in loss to the CLO.

The Kinetics Multi-Disciplinary Income Fund is classified as a diversified fund. Diversification does not ensure a profit or protect against loss in a declining market. You should consult the Fund's prospectus for a complete list of risks associated with your investment.

Unlike other investment companies that directly acquire and manage their own portfolios of securities, the Funds pursue their investment objectives by investing all of their investable assets in a corresponding portfolio series of Kinetics Portfolios Trust. You will be charged a redemption fee of 2.0% of the net amount of the redemption if you redeem or exchange your shares 30 days or less after you purchase them.

Index returns assume that dividends are reinvested and do not include management fees or expenses. You cannot invest directly in an index.
